Section 2. Hazards Identification

OSHA/HCS status	This mixture, only when in dry powder form or if sprayed, is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200)
Classification of the	OSHA - CARCINOGENICITY (Inhalation) - Category 1A
Substance or mixture	(See section 16 for OSHA, IARC, and NTP carcinogen listings) OSHA/HCS - SPECIFIC TARGET ORGAN TOXICITY (Repeated Exposure) (respiratory tract) (inhalation) - Category 2
Signal Word	Danger
Hazard Statement	WARNING! Cancer Hazard. Contains quartz (crystalline silica) which can cause cancer. Risk of cancer depends upon duration and level of exposure to dust . Not an acute hazard. Prolonged inhalation of dry glaze dust may cause lung injury. Inhalation of high concentrations of dry glaze dust may cause mechanical irritation and discomfort of the (respiratory tract). Repeated exposure may cause chronic effects. Wear a N-95 face mask when cleaning up dry glaze dust.
	* Glaze in liquid form poses <u>no health risk</u> . Inhalation of dry glaze dust or ingestion of glaze should be avoided.

*Frit, CAS # 65997-18-4, is a complex mixture of materials, fused into a glassy substance, confining the materials into a non-migratory form. **Proprietary blends of pigments used that are not considered a hazard; follow guidelines set for silica as a precaution.

Section 4: First-Aid Measures

Description of first-aid Measures:

Description of mist-alu	vicasures.
First-aid measures	Never give anything by mouth to an unconscious person. If you feel unwell, seek medical
general	attention.
First-aid measures	Move victim to well ventilated area. If mechanical discomfort persists, seek medical
after inhalation	attention.
First-aid measures	Remove contaminated clothing. Wash affected area with soap and warm water.
after skin contact	Obtain medical attention if irritation persists.
First-aid measures	Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy
after eye contact	to do. Continue rinsing. Obtain medical attention if pain, blinking, or redness persists.
First-aid measures	Rinse mouth. Give 200-300mL water to drink. Do NOT induce vomiting. If ingested, seek
after ingestion	medical attention as a precaution.

Most Important Symptoms and Effects, both Acute and Delayed:

to organs through prolonged or repeated exposure (inhalation) from dust.
er by repeated inhalation. Dust from firing this product may cause irritation
ry tract, lung inflammation, cough or chest pains.
act with large amounts of dust may cause mechanical irritation
act with large amounts of dust may cause mechanical irritation. Glaze is
ay scratch eyes.
ty has been ingested: intestinal blockage, gastrointestinal irritation.
blonged exposure to respirable crystalline silica dust can cause lung damage
licosis. Symptoms will include progressively more difficult breathing, cough, ht loss. Acute silicosis can be fatal.

If exposed or concerned, get medical advice and attention.

Safety Data Sheet

Section 5. Fire-Fighting Measures

SDS prepared by Jon Dunlavy 6/10/2015

GHS – United States

National Fire Protection Association (U.S.A.)

Suitable extinguishing media	This product is not combustible.		
	Use extinguishing media appropriate for surrounding fire.		
Unsuitable extinguishing media	No restrictions on extinguishing media for this mixture.		
Special hazards arising from the substance or	This mixture is not flammable and does not support fire. The plastic jars and		
mixture	cardboard boxes containing the mixture are flammable.		
Hazardous thermal decomposition products	This mixture does not contain hazardous decomposition products.		
Special protective actions	Product can become slippery when wet.		
for fire-fighters			
Special protective equipment	Fire-fighters should wear appropriate protective equipment.		
for fire-fighters			

Section 6. Accidental Release Measures

Use of personal precautions	Avoid inhalation of dry glaze dust. Wear a N-95 face mask when cleaning up dry clay dust.
Emergency procedures	There are no emergency procedures required for this mixture.
Methods and Materials for containment	Product comes in plastic pint or gallon jars. Do not allow spills or wastewater to flow into sewer or waterway.
Clean up procedures	For dry dusts, use a vacuum to clean up spillage. For liquid spills, use suitable absorbent material and place in disposal containers. If appropriate, use gentle water spray to wet down and minimize dust generation. Spill area can be washed with water. Place dry glaze dust in a sealed container. Wear a N-95 face mask when cleaning up dry glaze dust.

Section 7. Handling & Storage	
Precautions for safe handling	Keep out of direct sunlight. Do not expose to freezing.
Recommendations on the conditions for safe storage	No special storage considerations, but keep in a dry, cool location.

Appropriate engineering controls

Glaze in liquid form poses no health risk and no inhalation risk (dust).

Once glaze has dried, there may be dust generated by cleaning and working processes. In the event that dust is generated, use local exhaust ventilation or other engineering controls as required to maintain exposures below applicable occupational exposure limits (TLV). Not recommended for spray application, but local exhaust system may be used as required to maintain exposures below applicable occupational exposure limits (TLV) while spraying.

Recommendations for personal protective measures

Local Exhaust: When dry sanding or grinding clay/glaze products, or during spray application of glaze, use sufficient local exhaust to reduce the level of respirable dust to the applicable standards set forth in Section III. See ACGIH "Industrial Ventilation, A Manual of Recommended Practice," latest edition.

Respiratory Protection: Dust is generated when working with dry glaze or during spray application. To minimize exposure to dust and/or crystalline silica, cutting or sanding dry clay/glaze products should be conducted with sufficient ventilation. Respirable dust and quartz levels should be monitored regularly. Dust and quartz levels in excess of appropriate exposure limits should be reduced by feasible engineering controls, including (but not limited to) wet sanding, wet suppression, ventilation, and process enclosure. When such controls are not feasible, NIOSH/MSHA approved respirators must be worn in accordance with a respiratory protection program which meets OSHA requirements as set forth at 29 CFR1910.134 and ANSI Z88.2-1080 "Practices for Respiratory Protection". In most cases, a disposable N-95 Particulate Respirator is sufficient.

Eye Protection: Use NIOSH/OSHA approved safety glasses with side shields. Face shields should also be used when dry sawing clay/glaze products. Wear tight fitting dust goggles when excessively (visible) dusty conditions are present or are anticipated. NIOSH recommends that contact lenses not be worn when working with crystalline silica dust.

Skin Protection: Use gloves and/or protective clothing if abrasion or allergic reactions are experienced.

Work/Hygienic Practices: Avoid creating and breathing dust. Wear NIOSH/MSHA approved dust mask when working in dusty conditions. (N-95) Food, beverages, and smoking materials should NOT be in the work area. Persons using ceramic materials should wash thoroughly before eating, drinking, smoking, or applying cosmetics.

Protective Clothing Pictograms

Safety Data Sheet

SDS prepared by Jon Dunlavy 6/10/2015

GHS – United States

Section 9. Physical & Chemical Properties

Physical State	Liquid glaze
Appearance	Colored, heavy liquid
Odor	Earthy
Odor Threshold	Not Applicable
рН	6 - 8
Solubility in Water	Miscible
Melting Point	> 982 °C (>1800°F)
Freezing Point	< 0 °C (<32°F)
Specific Gravity	1.3 - 1.8
Relative Density	10.8 - 15.0 lb/gal
Evaporation Rate	No data available
Boiling Point	100°C (212°F)
Flash Point	Not Applicable
Auto-Ignition Temperature	Not Applicable
Decomposition Temperature	Not Applicable
Flammability	Not Applicable
Vapor Pressure	Not Applicable
Vapor Density	Not Applicable
Explosive Limits	Not Applicable
Viscosity	Not Applicable
Partition Coefficient: n-octanol/water	Not Applicable

Section 10: Stability & Reactivity	
Reactivity	Hazardous reactions will not occur under normal conditions.
Chemical stability	Stable at standard temperature and pressure. No stabilizers required to maintain chemical stability.
Possibility of hazardous reactions	Hazardous polymerization will not occur.
Conditions to avoid	None known.
Incompatible materials	None known
Hazardous decomposition products	None Known.

Section 11: Toxicological Information

Routes of Exposure

Inhalation of dry glaze dust, Ingestion

Descriptions of the delayed, immediate, or chronic effects from short- and long-term exposure			
Inhalation Inhalation of high concentrations of dry glaze dust may cause mechanical			
irritation and discomfort. Repeated exposure may cause chronic effects.			
Eye Contact	Not a primary eye irritant. May cause mechanical irritation.		
Skin Contact/Irritation	May cause mechanical irritation. Not absorbed through skin.		
Sensitization	Not a sensitizer.		
Ingestion	May cause intestinal blockage.		

Safety Data Sheet

Safety Data Sheet	SDS prepared by Jon Dunlavy 6/10/2015	GHS – United States
Chronic Effects		
OSHA Carcinogen	Lung cancer – Silica has been classified by OSHA as a Repeated or prolonged exposure to respirable crysta lung damage in the form of silicosis. Symptoms will in difficult breathing, cough, fever, and weight loss. Acu	lline silica dust can cause nclude progressively more
Mutagenic Effects	None Known	

Mutagenic Effects	None Known
Teratogenic Effects	None Known
Developmental Toxicity	None Known
Effects of Silicosis	Symptoms of Silicosis
Bronchitis/Chronic Obstructive Pulmonary	Shortness of breath; possible fever.
Disorder.	Fatigue; loss of appetite.
Tuberculosis – Silicosis makes an individual	Chest pain; dry, nonproductive cough.
more susceptible to TB.	Respiratory failure, which may eventually lead to death.
Scleroderma – a disease affecting skin, blood	
vessels, joints and skeletal muscles.	
Possible renal disease.	
Numerical Measures of toxicity	None Known

Section 12. Ecological Information (non-mandatory)

Prevent from entering drains, sewers and waterways

Lithium and Zinc compounds may be hazardous to the environment and aquatic life if released in large quantities.

Section 13. Disposal Considerations (non-mandatory)

Personal Protection	Refer to Section 8: "Recommendations for Personal Protective Measures" when disposing of ceramic waste.
Appropriate disposal containers	Standard waste disposal containers – no specials requirements.
Appropriate disposal methods	Disposal of this product should comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. The generation of waste should be avoided or minimized. Dispose of non-recyclable products via a licensed waste disposal contractor. Waste packaging should be recycled. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains, and sewers.
Physical and chemical properties that may affect disposal	Dry glaze dust should be placed in a sealed container or in a manner that reduces or eliminates the release of the product. Liquid glaze should be placed in suitable container. Packaging should be recycled before disposal.
Sewage disposal	Do not dispose of into sinks or toilets. They will clog. Never dispose of this product into a sewer system.
Special precautions for landfills or incineration activities	There are no special precautions for disposal in a landfill. This product is non-combustible and is not suitable for incineration.

CLAY PLANET Safety Data Sheet

SDS prepared by Jon Dunlavy 6/10/2015

GHS – United States

Substances, mixtures and exposure circumstances in this list have been classified by the <u>IARC</u> as *Group 1*: *The agent (mixture) is* <u>carcinogenic</u> to humans. The exposure circumstance entails exposures that are carcinogenic to humans. This category is used when there is *sufficient evidence* of carcinogenicity in humans. Exceptionally, an agent (mixture) may be placed in this category when evidence of carcinogenicity in humans is less than sufficient but there is *sufficient evidence* of carcinogenicity in experimental animals and strong evidence in exposed humans that the agent (mixture) acts through a relevant mechanism of carcinogenicity.

The agents in this list have been classified in **Group 2A** (probable <u>carcinogens</u>)^[1] by the IARC (<u>International Agency for Research on</u> <u>Cancer</u>). The term "agent" encompasses both substances and exposure circumstances that pose a risk. This designation is applied when there is *limited evidence* of <u>carcinogenicity</u> in humans as well as *sufficient evidence* of carcinogenicity in <u>experimental animals</u>. In some cases, an agent may be classified in this group when there is *inadequate evidence* of carcinogenicity in humans along with *sufficient evidence* of carcinogenicity in experimental animals and *strong evidence* that the carcinogenesis is mediated by a mechanism that also operates in humans. Exceptionally, an agent may be classified in this group solely on the basis of *limited evidence* of carcinogenicity in humans.

Substances, mixtures and exposure circumstances in this list have been classified by the <u>International Agency for Research on Cancer</u> (IARC) as *Group 2B: The agent (mixture) is possibly carcinogenic to humans. The exposure circumstance entails exposures that are possibly carcinogenic to humans.* This category is used for agents, mixtures and exposure circumstances for which there is limited evidence of carcinogenicity in humans and less than sufficient evidence of carcinogenicity in experimental animals. It may also be used when there is inadequate evidence of carcinogenicity in humans but there is sufficient evidence of carcinogenicity in experimental animals. In some instances, an agent, mixture or exposure circumstance for which there is inadequate evidence of carcinogenicity in experimental animals together with supporting evidence from other relevant data may be placed in this group. Further details can be found in the <u>preamble to the IARC Monograph</u>.

Substances, mixtures and exposure circumstances in this list have been classified by the <u>IARC</u> as *Group 3*: *The agent (mixture or exposure circumstance)* is not classifiable as to its carcinogenicity to humans. This category is used most commonly for agents, mixtures and exposure circumstances for which the evidence of carcinogenicity is inadequate in humans and inadequate or limited in experimental animals. Exceptionally, agents (mixtures) for which the evidence of carcinogenicity is inadequate in humans but sufficient in experimental animals may be placed in this category when there is strong evidence that the mechanism of carcinogenicity in experimental animals does not operate in humans. Agents, mixtures and exposure circumstances that do not fall into any other group are also placed in this category.

Further details can be found in the IARC Monographs.

Appendix C – Supplementary Exposure Limits

Mineral Dusts

OSHA PELS for "mineral dusts" listed below are from Table Z-3 of 29 CFR 1910.1000. The OSHA PEL (8-hour TWA) for crystalline silica (as respirable quartz) is either 250 mppcf divided by the value " $SiO_2 + 5$ " or 10 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PEL (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PEL (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PEL (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value " $SiO_2 + 2$." The OSHA PELs (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m³ divided by the value silica (as total quartz) is 30 mg/m³ divided by the value silica (as total quartz) is 30 mg/m³ divided by the value silica (as total quartz) is 30 mg/m³ divided by the value silica (as total quartz) is 30 mg/m³ divided by the value silica (as total quartz) is 3

The OSHA PEL (8-hour TWA) for amorphous silica (including diatomaceous earth) is either 80 mg/m³ divided by the value " SiO_2 ," or 20 mppcf.

The OSHA PELs (8-hour TWAs) for talc (not containing asbestos), mica, and soapstone are 20 mppcf. The PELs for talc (not containing asbestos), mica, and soapstone, are applicable if the material contains less than 1% crystalline silica.

CLAY PLANET Safety Data Sheet

Clay Planet

SDS prepared by Jon Dunlavy 6/10/2015

GHS – United States

Section 16. Other Information

Definitions

OSHA means Occupational Safety & Health Administration IARC means International Agency for Research on Cancer

Definitions

NTP means National Toxicology Program HCS means Hazardous Communication Standard TLV means Threshold Limit Value - American Conference of Governmental Industrial Hygienists (ACGIH) PEL means OSHA Permissible Exposure Limit TWA means Time Weighted Average (average exposure on the basis of an 8h/day, 40h/week work schedule) CAS means Chemical Abstract Service ASTM means American System of Testing and Materials

This SDS is in compliance with The Globally Harmonized System of Classification and Labeling of Chemicals (GHS). This data sheet is subject to change without notice.

Information presented herein has been compiled from sources considered to be dependable and is accurate and reliable to the best of our knowledge and belief but is not guaranteed to be so. Nothing herein is to be construed as recommending any practice or any product in violation of any patent or in violation of any law or regulation. It is the user's responsibility to determine for himself the suitability of any material for a specific purpose and to adopt such safety precautions as may be necessary. We make no warranty as to the results to be obtained in using any material and, since conditions of use are not under our control, we must necessarily disclaim all liability with respect to the use of any material supplied by us.
