### Student Learning Outcomes

**Students can:**

- Identify and explain general environmental principles.
- Describe and employ the scientific process and techniques, especially as these apply to the environmental sciences.
- Successfully communicate in both oral and written scientific format and be information literate.
- Develop a personal ethic of stewardship and sustainable living.

### Occupational Information

**What can I do with this major?**

The core requirements of the Environmental Studies major provide a solid foundation for various specializations. By selecting the appropriate electives, our B.S. degree allows students to create their own emphases. In order to enhance employability or admission to graduate schools, it is highly recommended that students be clear on their vocational objectives and consult with departmental advisors as needed.

A required Internship includes volunteer service or employment with an environmental organization, thus providing crucial on-the-job experience. Career possibilities include jobs in air quality, conservation biology, energy, environmental economics, environmental policy, marine resources, solid waste management, water management and wildlife management.

**Additional Education Required?**

A master's degree is required for many intermediate-level environmental jobs and is desirable for teaching science at the secondary level and in community colleges. A doctorate degree is normally required to do research in an environmental profession, and is required for many upper-level jobs as well as for teaching at university and four-year colleges.

**Job Outlook**

Environmental studies is a broad and rapidly growing field of study. Federal, state, and local agencies are the primary employers. Environmental studies graduates may also be employed by private consulting firms. Public, occupational, and environmental health are common career specialties.

Salaries of environmental professionals vary greatly, depending on qualifications and experience. Visit [www.bls.gov/ooh/life-physical-and-social-science/home.htm](http://www.bls.gov/ooh/life-physical-and-social-science/home.htm) for details.

\* Biological Foundations or General Chemistry should be taken during the first two years, but only in the same year by students who are well prepared, highly motivated and disciplined. If taking more chemistry than biology electives, General Chemistry should be taken first and Biological Foundations later.

\*\* Needed only if High School chemistry is weak.

\*\*\* See the front of this sheet for a list of Environmental Studies electives.
